COMPATIBLE CONNECTORS:

1. Only a locking carabiner may be attached to a web loop. Fig. 1

2. A locking snaphook or locking carabiner may be connected to a D-ring of a harness or other component fitted with a D-ring. Fig. 2

3. Do not use a snaphook on a web loop.

The following compatibility chart applies only to equipment manufactured by Super Anchor Safety®. Harnesses, shock absorbers, lanyards, and rope grabs are fitted with two types of terminations for connecting hardware: forged or stamped proof-loaded D-rings shown in Fig. 2, or sewn web loops shown in Fig. 1.

Auto-locking snaphooks or auto-locking carabiners are the only type of connecting hardware specified for use with our equipment.

NOTE:
Some harnesses have a shock absorber attached to the harness D-ring with a sewn web loop. If the harness/absorber is subject to a free fall, do not cut off the absorber and attach a new one. The harness and absorber must be removed from service.
