

Retractable Lifelines

OVERVIEW

Self Retracting Lifelines (SRL's) are used widely in residential and commercial construction. A static device that maintains constant pressure on the worker and locks when a sudden force is applied reducing free fall distances. The SAS Sidewinder™ series features a built in steel carry/connector handle that provides a failsafe in the event the casing is damaged. This is an advantage over casing designs that rely on casing integrity only for the connector attachment. Another SAS exclusive, all the SRL critical data is permanently engraved onto the casing and our product i.d and inspection labels are replaceable upon request.

- Heavy duty ABS housing with galvanized cable
- Available in 10', 20', 30' and 50' lengths
- Fall indicator swivel snap hook
- Critical Data permanently engraved
- English Spanish instructions and labels
