

Lanyards and Connector Options

OVERVIEW

Sewn on our automated machines, lanyards are constructed of 1.0" wide 9,800lbs nylon webbing that is vat dyed to retain its color. All web loop ends are reinforced with a wear pad that reduces chaffing caused by the connector and helps to extend the service life of the lanyard. We use state of the art programming and tested stitch patterns to make sure that we give you the absolute best lanyard money can buy.

- 9,800lbs test webbing used for lanyards
- Available with either carabiner or snap hook connectors
- Stock lengths of 12", 18", 24", 48" and 72"
- Custom lanyards available with your choice of connectors
- Lanyards comply with OSHA and ANSI standards
- All connectors comply with ANSI and CSA for 3,600lb gate strengths.
