

# Anchors G-Clamp System

OVERVIEW

## Secure to Any Kind of Roof Without Nails or Screws

The G-Clamp Fall Protection System is temporary and reusable fall arrest anchor system that does not rely on screws or nails for installation. Our system uses friction and tension to create an ultra-strong, reusable, OSHA compliant fall arrest anchor on virtually any type of roof. The system has 3 main parts – the G-Clamps that install under the eave, a Saddle or Hinged Peak Anchor and 2 heavy duty ratchet straps. When tension is applied to the system with the ratchets it creates a friction based fall arrest system. No tools are needed to install the system. Absolute genius.

No nails. No screws. No bolts. No holes. No damage. No Patching or Replacing. Increase your potential for new jobs and gain business with confidence. Reduce your liability from damaged roofs or water leaks. Eliminate your fall protection issues and protect yourself and your employees with the new G-Clamp Fall Protection System. This is the system that contractors have been waiting for. The future of fall protection has arrived – order yours today!
