

Commercial Roof Anchors

OVERVIEW

Commercial Roof Anchors

With over 24 years of experience, Super Anchor Safety is the industry leader for commercial roof anchors and horizontal lifeline systems. Used primarily on low slope applications, anchors are custom fabricated for attachment to any type of structural support and to any architectural requirement. Our time tested anchor designs are cost effective, easy to install, low maintenance and feature state of the art pre-cast loop top and pass through connector fixtures. And we stock all the horizontal lifeline accessories needed for your project including ANSI/IWCA-1-14.1 window washing and CAL-OSHA compliant roof anchors. And SAS can supply USA mfg. and USA certified steel anchors.

Cast Loop Top Structural Advantage

Cast fixtures are fabricated as a single piece component that does not require forming and welding of bar stock. The streamline design is compatible with all PPE connectors and HLL accessories. Our cast loop tops consistently test at very high values of 10,000lb or more without fracture.

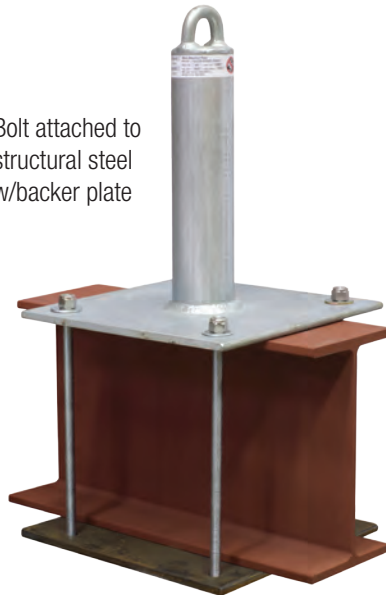

Loop Top Fixture 1091-S

CAL-OSHA

Standard for 4.5" o.d. risers Q345 and 316 stainless steel 2.0" Loop i.d.

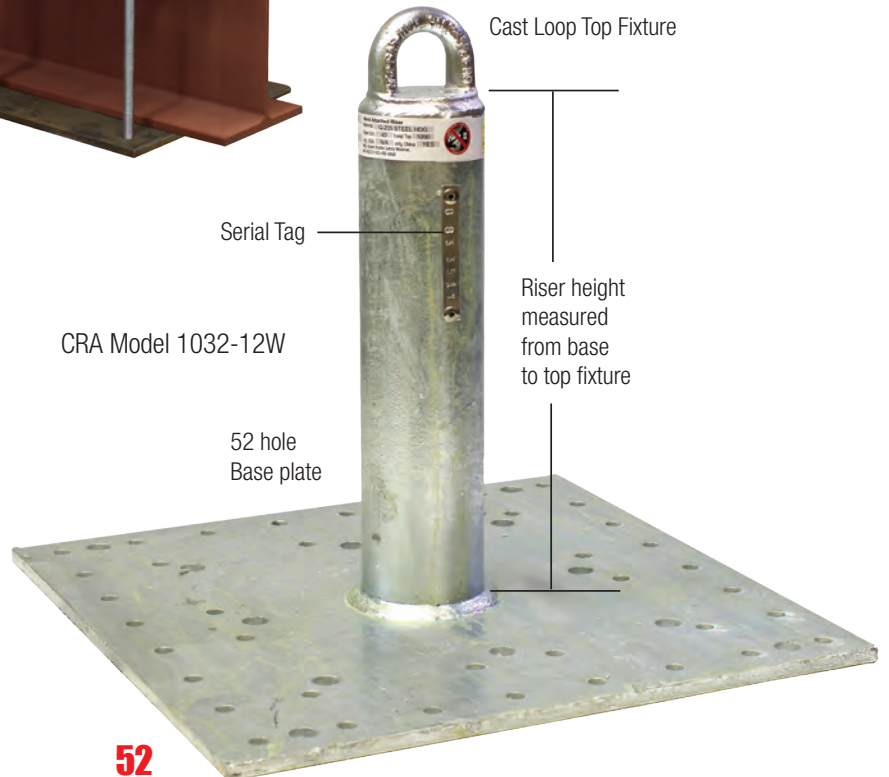

Bolt attached to structural steel w/backer plate

CRA Model 1032-12W

Serial Tag

52 hole Base plate

Custom Services:

- Plan location of anchor points for PPE and Window Washing
- Horizontal lifeline engineering/design
- Domestic mfg. of pre-engineered designs
- Domestic mfg. of custom designs
- Project specific structural 3rd party engineering
- Competent person installation/training classes English and Spanish
