

Anchors

ARS Series

OVERVIEW

The ARS series are permanent roof anchors that are installed during framing or may be retro-fitted to any wood framed structure. Designed for use with all types of roofing materials, they are bolt attached to the top chord for the highest strength rating of any residential anchor we supply. Fabricated with durable 430 grade stainless steel, these anchors will provide fall protection for the lifetime of the roofing system. Our flashing base and stem cover have a locking feature that keeps water out in all kinds of weather. Storm caps are available in 3 colors to reduce visibility even more.
