

MAX Force™ Energy Absorbers

Standard Absorbers with Fall Arresters and Integral Adjusters

Mechanical Fall Arresters and Integral Adjusters have single direction locking functions that require correct orientation when installed onto a lifeline. Fall Arresters are removed from the lifeline by unlocking a hinged gate. Integral Adjusters are not designed for removal. By factory attaching the rope grabs this eliminates 1 connector resulting in a lighter component. 4015-C/Z are panic grab models that prevent the worker from disabling the locking function during a free fall and comply with ANSI-Z359.1-07

All models listed here have a user weight of 100-310lb

Model	A-end	B-end	wt/oz.
6195-C	Snap Hook	4015-C Fall Arrester	43
