

Commercial Roof Anchors • CRA-PT

Pass-Thru System

SAS Horizontal Lifeline Systems (HLL's) specify a unique Pass-Thru (PT) top intermediate anchor that supports a 3/8" wire rope (HLL Cable). PT tops provide a low cost non-mechanical rigging method that allows a worker to travel from one end of a HLL leg to the other without disconnecting their PPE attachment allowing several workers to be attached to a single HLL system at one time. SAS commercial HLL systems are 3rd party engineered. *DH Glabe HLL report available upon request.*

HLL End Anchor Options

Note: Field weld risers of the same anchor models may be used.

Pull O-Ring away from the loops and apply downward pressure to the cable at the same time.

Rotate the O-Ring away from the loops completing the Pass-Thru. Reverse the procedure to pass back thru.

Super Anchor Safety HLL's are supplied with 4 PPE No.5010-SM connector O-Rings
