

Harness Accessories

No.6060 Trauma Suspension Ladder

OSHA and CSA require that workers suspended in a full body harness must be rescued promptly. Suspension trauma is one of the more serious hazard exposures resulting from free falls.

Physical tests with live subjects report that most workers cannot withstand suspension for more than 5-15 minutes without suffering excruciating pain, serious injury or death from asphyxiation or heart failure. SAS No.6060 provides immediate relief from suspension trauma until a rescue can be made. An absolute must for fall protection safety and compliance to OSHA regulations. For more information, Google "suspension trauma" for dozens of articles on the subject.

Specifications

- 100% polypro waterproof webbing
- 8ea 3/4" wide foot loops
- Compact and lightweight attaches to all harness webbing sizes
- Easy to deploy and reusable
- English/Spanish/ French Labels and 2 page instruction manuals.
- Factory attached emergency use instructions
- **Compliance:** OSHA 1926.502
