

RS™ Series Anchors

The RS Series is an industry standard for permanent or temporary use on new or re-roofing projects. RS models are compatible with many types of roofing and siding materials. Designed for installation at the ridge, in the field or wall mounted. The RS Series can be installed using nails or screws over sheathed framing members and metal decks. The 1,000 hr salt spray tested Dacromet coating provides a high level of protection against oxidation compared to yellow zinc. For areas where salt air is present, the Retro-Fit and RS-20 dual hole models are available in 100% Stainless Steel.

SAS RS-Series Exclusive Model Types

These special features are not offered by any other mfg.

- Dual Size Fastener Holes
- Dacromet Coated D-Rings
