

Tie-off Straps

Tie-off straps are used as an anchorage for temporary fall protection. Light weight, flexible and versatile, they can be attached to almost any type of supporting structure. Use with wood framing, structural steel and concrete embedment. Compatible with all Super Anchor Safety lifelines, lanyards and self retracting lifelines.

Tie-off straps are a cost effective means to provide a temporary anchorage point. They are easy to install and are an alternative fall protection option when permanent anchors are not available.
