

Tie-off Straps

Concrete Embedment / Abrasion Protection

Embedment Tie-off Straps have a heavy duty polyester sleeve to protect the structural webbing from abrasion. The protective sleeve is ideal for wrapping around structural steel or other highly abrasive tie-off points, extending the service life of the strap. The loop end may be cinched or secured to structural rebar for embedment in concrete. These straps have been certified for concrete embedment by a 3rd party engineer.

Heavy Duty Tie-Off Straps

Made with high strength 2" webbing, these straps are ideal for use on highly abrasive tie-off points. The heavy duty tie-off straps are durable and very flexible due to the nylon webbing construction. Manufactured at our factory in Monroe, WA these heavy duty tie-off straps are the highest quality strap we make.
