

Cable Self-Retracting Lifelines

Self Retracting Lifelines (SRL's) are used widely in residential and commercial construction. This static device maintains constant pressure on the worker and locks when a sudden force is applied reducing free fall distances.

The Super Anchor Safety Sidewinder™ series features a built in steel carry/connector handle that provides a failsafe design in the event the casing is damaged.

This is an advantage over casing designs that rely on casing integrity only for the connector attachment.

- Overhead or horizontal use
- Leading edge option available
- 3/16" galvanized steel cable
- Heavy duty ABS Housing
- Fall indicator swivel snap hook
- Durable grip handle
- Integrated carry handle w/steel carabiner
- English/Spanish label and manual
