

# Anchors

## ARS Series

The ARS series of anchors are permanent roof anchors that are installed during framing or retro-fitted to any wood framed structure. Designed for use with all types of roofing materials, they are bolted to the top chord for the highest strength rating of any residential anchor we supply. Fabricated with durable 430 grade stainless steel, these anchors will provide fall protection for the lifetime of the roofing system. Our flashing base and stem cover have a locking feature that keeps water out during inclement weather. Stem covers are offered in 3 colors to reduce visibility.
